

NEW BRANCH PIPE TEES

MEETING AAR S-400 ADDITIONS

SWBT20-16N

- Used when the Control Valve is mounted above the Branch Pipe Tee
- The design locates the 1" branch pipe connection in the upper half of the 1-1/4" brake pipe. Positioning the 1" branch pipe in this manner only allows air flow off the top half of the brake pipe, reducing the chance of debris and water from entering the control valve, therefore, the control valve is less likely to pick up debris and water.

SWT20-16F

- This feature functions in all positions of the "UP" arrow (see below).
- Designed in conjunction with the latest additions to AAR Standard S-400.
